systems

ABOUT US

The company was established in **1986** and at the beginning it specialized in the repairing and replacement of exhaust systems. Four years later, as the Company "**ULTER**", dealing with production, services and sales, it started with the manufacturing of standard silencers for many types of cars.

In **1992**, in line with the growing demand of the automotive market for sport exhaust systems, basing on the wide experience of specialists, the production of sports silencers and tail pipes has been started. The requirements of the clients towards the producers of this industry were decisive for introducing many new technologies and high-parameter materials. The final product has met the expectations of recipients and, as a result, the company received a certificate awarded by the Automotive Industry Institute "PiMOT" in Warsaw, which entitles it to mark its products with the "B" safety mark.

In **2001 ULTER-SPORT Ltd.** was established with the primary target of developing a sales network and realize the plan of building a modern plant, which could meet the strict requirements of clients from Western Europe.

After two years the plan was completed, and as a result a new plant in Węgierska Górka close to Żywiec has been opened. The new plant has been equipped with technological facilities, enabling the market of the European Union to be conquered. The company has its seat in the above mentioned place until today.

In **2004** the plant received ISO 9001:2000 certificate from German **TÜV CERT Saarland** Institute with the seat in Sulzbach, which allowed the compliance of the production with ISO 9001:2000 standards and the plant obtained a **TÜV CERT** label and European Homologation confirmed with tests performed by **TÜV SÜD** from Munich. In addition to its long-term presence in the market of spare parts and accessories for cars and the car tuning market, which set the directions of the sales of the company's products, **ULTER-SPORT** has actively and dynamically

developed production for the needs of the automotive industry within the scope of the delivery of components for exhaust systems, which are primary car equipment. Nowadays **ULTER-SPORT** delivers products to well-known car manufacturers in Poland, as well as abroad.

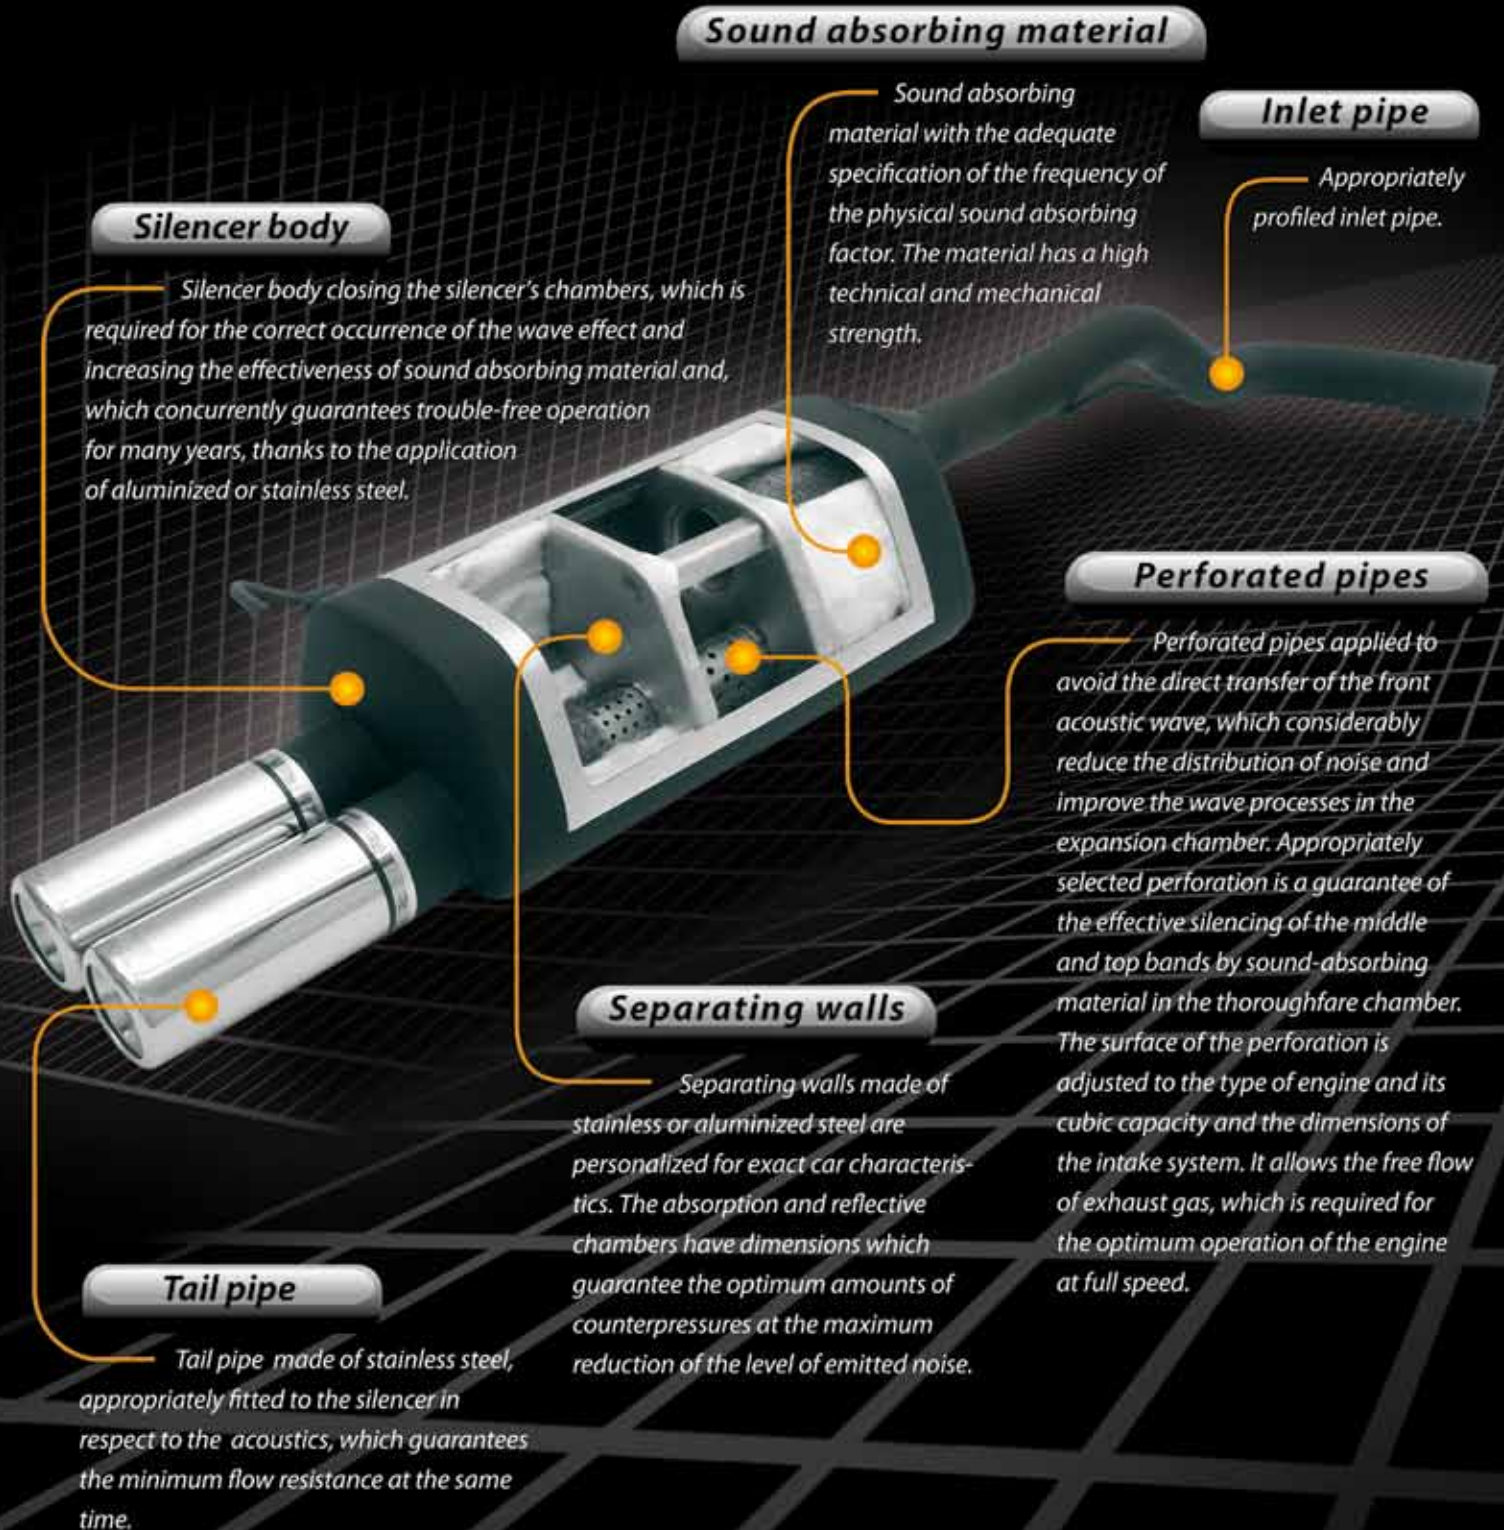

We are convinced that our products will meet the expectations of even the most demanding customers. Hence you are invited to familiarise yourselves with the sales offer of **ULTER-SPORT**.

VICE PRESIDENT
Piotr Urbaniec

PRESIDENT
Łukasz Halama

Products of Ulter-Sport have homologation certificates confirmed by TÜV SÜD Munich, which cooperates with us in relation to the compliance of our products with the respective regulations of the European Union.

Silencer body

Silencer body closing the silencer's chambers, which is required for the correct occurrence of the wave effect and increasing the effectiveness of sound absorbing material and, which concurrently guarantees trouble-free operation for many years, thanks to the application of aluminized or stainless steel.

Sound absorbing material

Sound absorbing material with the adequate specification of the frequency of the physical sound absorbing factor. The material has a high technical and mechanical strength.

Inlet pipe

Appropriately profiled inlet pipe.

Perforated pipes

Perforated pipes applied to avoid the direct transfer of the front acoustic wave, which considerably reduce the distribution of noise and improve the wave processes in the expansion chamber. Appropriately selected perforation is a guarantee of the effective silencing of the middle and top bands by sound-absorbing material in the thoroughfare chamber. The surface of the perforation is adjusted to the type of engine and its cubic capacity and the dimensions of the intake system. It allows the free flow of exhaust gas, which is required for the optimum operation of the engine at full speed.

Separating walls

Separating walls made of stainless or aluminized steel are personalized for exact car characteristics. The absorption and reflective chambers have dimensions which guarantee the optimum amounts of counterpressures at the maximum reduction of the level of emitted noise.

Tail pipe

Tail pipe made of stainless steel, appropriately fitted to the silencer in respect to the acoustics, which guarantees the minimum flow resistance at the same time.

Tail pipes – single and double

They are assembled by screwing with a clamping ring or welding on. They have a so-called assembly cup, which is adjusted appropriately to the diameter of the exhaust pipe. Most frequently offered diameters: Ø42, Ø45, Ø50, Ø55, Ø60 - depending on the technical capabilities.

Dimensions quoted in the offer specify the following:

For single tail pipes – shape and length of the assembly element

For double tail pipes – shape and length of the decorative element + length of the connecting element, without an assembly cup.

* (star) indicates a tip without an insert trim (diffuser)

Assembly pipes

They are assembled directly to the end-cover of the silencer, by welding them on.

Assembly pipes are marked with yellow colour ■

Tail pipes and embellishers for specific car models

They are assembled on the exhaust pipe of the silencer with a fixing screw or a clamping ring.

Dedicated embellishers are adjusted to specific car models. They give them an original look and ensure trouble-free assembly.
